Please delete the Abstract in the subject application and substitute therefor the following:

ABSTRACT

An in-line coaxial cable connector (10) has an electrically insulating member (32) that is fitted over a first electrical contact (22) and has a first end (32a) and a second end (46) extending over a second end (26) of the first electrical contact (22). The terminus of the second end (46) includes a lip (48) forming an alignment area for the reception of a mating electrical contact. The lip (48) protects the contact beams of the contact (22) and eliminates the possibility of the contact (22) mismating with its complement on a mating connector.

Respectfully submitted,
